

Hexagonal Containers

Jasper Morrison, 2018

Hexagonal Containers

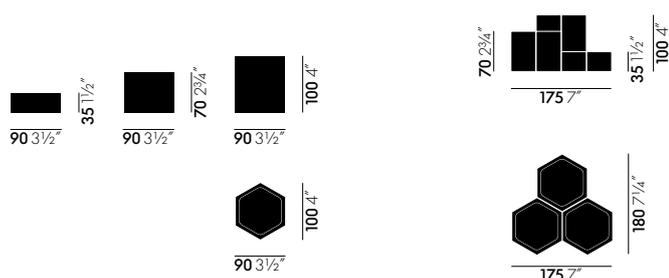

The British designer Jasper Morrison has worked together with Vitra for 30 years. Over the course of this long, productive period, he has created a number of small decorative objects in addition to his well-known furniture designs. Morrison has now applied his unerring instinct for proportions and materials to the creation of the Hexagonal Containers – compact all-purpose containers with a six-sided shape that can be arranged in attractive combinations. The weight of the sturdy ceramic material provides good stability,

while its fine, cool surface has a strong tactile appeal.

The Hexagonal Containers come in sets of three, with staggered heights in a ratio of 1/3, 2/3 and 3/3. Available in coordinated colours, they serve as practical, playful holders for utensils and small objects.

- **Material:** ceramic.
- **Package contents:** set of three in different sizes.
